EDUCATION

University of Virginia

Charlottesville, VA

Bachelor of Science in Computer Engineering | Prior GPA: 3.6/4.0

Aug. 2026 – May 2028

- **Relevant Coursework:** Distributed Systems, Computer Architecture, Machine Learning, Operating Systems

City College of New York

New York, NY

Computer Engineering | GPA: 3.6/4.0 | 5x Hackathon Winner, 3x Dean's List

Aug. 2024 – May 2026

- **Relevant Coursework:** Data Structures and Algorithms, Software Engineering and Design, Database Systems

EXPERIENCE

Bloom Energy

June 2026 – Aug. 2026

Software Engineering Intern

San Jose, CA

- Built an AI agent that autonomously queried 3 databases, applied diagnostic rules, analyzed historical patterns, and generated root-cause and repair recommendations for escalation cases, solving 45+ tickets
- Built and shipped a production visual workflow platform with a versioned compiler that converted node-based workflows into validated notebooks and pipelines, enabling script development for non-coders
- Reduced AWS Redshift query latency from about 50s to <10s by refactoring nested queries and data-access logic, then exposed the optimized data layer through an MCP server for local developer tooling

Rehost

Dec. 2025 – Mar. 2026

Software Engineering Intern

Remote

- Improved 30-day returning users by building an agentic Retention Autopilot that ingests analytics, segments users, and launches approved A/B-tested push + rewards campaigns, cutting campaign setup time by 30%
- Built a Spring Boot + PostgreSQL uptime service monitoring 6 production products, running a lock-based distributed scheduler across 3 instances for high availability with zero duplicate checks
- Cut outage detection time from 45 minutes (via customer reports) to 2 minutes by designing an alerting engine with flap detection, database-enforced incident deduplication, and Slack escalation

StemKasa

June 2025 – Aug. 2025

Software Engineering Intern

New York, NY

- Led 3 interns to rebuild a tightly coupled legacy app as a MERN application, implementing component-based architecture, REST APIs, and integration tests while preserving full feature parity
- Architected and deployed a full CI/CD pipeline using GitHub Actions, automating build, test, and deployment workflows, replacing error-prone manual deployments across staging and production environments
- Integrated Stripe subscription billing and secure auth for a GPT-powered tutoring feature with adaptive flashcards and lessons, increasing weekly active students by 25% across 3 schools

Universacare

June 2023 – Sept. 2023

Software Automation Intern

New York, NY

- Built Python/Selenium automation for daily Home Health Aide data extraction, improving productivity by 11%
- Built 15 reusable React components and a role-aware application form, saving 2+ hours per submission

PROJECTS

Squeeze (Morgan Stanley 2026 Hackathon Winner)

FastAPI, LangGraph, Next.js, AWS Bedrock

- Built an event-management platform; acquired by hackathon partner Lemontree (500K+ accounts)

RhetoriQ | [Source Code](#)

Kafka, Flink, Kubernetes, LangChain

- Built a low-latency narrative-analysis pipeline using Kafka/Flink, Neo4j graph traversal, pgvector semantic search, Redis caching, and Kubernetes microservices, load-tested at 400 documents/sec with p95 latency under 600 ms
- Designed a 7-agent LangChain workflow where a planner breaks down investigations and specialized agents use the pipeline's graph and vector stores alongside Hugging Face NLP models to trace the origin and spread of news

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, Java, MATLAB, SQL

Frameworks: FastAPI, Spring Boot, React.js, React Native, PyTorch, scikit-learn, Next.js

Developer Tools: Git/GitHub, AWS, Docker, Redis, PostgreSQL, MongoDB, LangChain, Kubernetes, Grafana
