EDUCATION

University of Virginia

Charlottesville, VA

Bachelor of Science in Computer Engineering

Aug. 2026 – May 2028

- **Relevant Coursework:** Distributed Systems, Computer Architecture, Machine Learning, Operating Systems, Data Structures and Algorithms, Intro to Embedded Systems, Software Engineering and Design, Database Systems

City College of New York

New York, NY

Computer Engineering, 5x Hackathon Winner, 3x Dean's List

Aug. 2024 – May 2026

EXPERIENCE

Software Engineering Intern

June 2026 – Aug. 2026

Bloom Energy

San Jose, CA

- Built an AI agent that autonomously queried 3 databases, applied diagnostic rules, analyzed historical patterns, and generated root-cause and repair recommendations for escalation cases, solving 45+ tickets
- Built and shipped a production visual workflow platform with a versioned compiler that converted node-based workflows into validated notebooks and pipelines, enabling script development for non-coders
- Reduced AWS Redshift query latency from ~50s to <10s by refactoring nested queries and data-access logic, then exposed the optimized data layer through an MCP server for local developer tooling

Software Engineering Intern

Dec. 2025 – Mar. 2026

Rehost

Remote

- Improved 30-day returning users by building an agentic Retention Autopilot that ingests analytics, segments users, and launches approved A/B-tested push + rewards campaigns, cutting campaign setup time by 30%

Software Engineering Intern

June 2025 – Aug. 2025

StemKasa

New York, NY

- Led 3 interns to rebuild a 17-file monolith as a MERN app, implementing component-based architecture, REST APIs, and integration tests while preserving full feature parity
- Architected and deployed a full CI/CD pipeline using GitHub Actions, automating build, test, and deployment workflows to eliminate manual deployment errors across staging and production environments
- Engineered an AI tutoring layer with GPT-powered adaptive flashcards and lessons, then integrated secure auth and Stripe subscriptions, driving a 25% engagement increase across 3 schools

Undergraduate Researcher

June 2025 – Dec. 2025

City College of New York

New York, NY

- Co-authored research on a self-critiquing LLM pipeline combining expert feedback, distillation, reinforcement learning, and Pareto optimization, improving model accuracy while reducing infrastructure costs by up to 90%

Software Automation Intern

June 2023 – Sept. 2023

Universacare

New York, NY

- Built Python/Selenium automation for daily Home Health Aide data extraction, improving productivity by 11%
- Built 15 reusable React components and a role-aware application form, saving 2+ hours per submission

PROJECTS

Squeeze (Morgan Stanley 2026 Hackathon Winner)

FastAPI, LangGraph, Next.js, AWS Bedrock

- Built an event-management platform; acquired by hackathon partner Lemontree (500K+ accounts)

RhetoriQ | [Source Code](#)

Kafka, Flink, Kubernetes, LangChain

- Built a low-latency narrative-analysis pipeline using Kafka/Flink, Neo4j graph traversal, pgvector semantic search, Redis caching, and Kubernetes microservices to process 100K+ daily documents
- Designed a 7-agent LangChain investigation system for planning, search, and tracing using HuggingFace NLP models to track the origin and spread of political news

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, Java, MATLAB, SQL

Frameworks: FastAPI, Spring Boot, React.js, React Native, PyTorch, scikit-learn, Next.js

Developer Tools: Git/GitHub, AWS, Docker, Redis, PostgreSQL, MongoDB, LangChain, Kubernetes, Grafana
